

HEXARMOR NXT 10-302

NXT 10-302

The NXT 10-302 has the highest cut-resistance available. The quadstretch design technology gives incredible feel, particularly when compared to other bulky cut resistant gloves. Form fitting fingertips allow dexterity in a variety of cutting applications. The NXT 10-302 can easily be worn over or under latex, nitrile and vinyl gloves.

- Key injury areas guarded with ISEA Level 5 protection
- SuperFabric® brand material and Cortek™ fiber together provides 5 times the cut-resistance and 11 times the abrasion-resistance of traditional HDPE gloves
- Shielding design of the fibers and the SuperFabric plating reduces the ability of sharp objects to penetrate the glove and cause injury
- Innovative knife-slip protection
- Guard plates deflect knife tips away from user instead of snagging and pulling into hand
- TruShield™ performance platform lessens likelihood that knife blade or tip will contact user's hand
- Cortek fiber keeps hands comfortable and cool while providing dexterity and all around cut protection
- Not bulky or rough like fiber-based gloves
- Ambidextrous, sold individually
- Can be easily sanitized or washed in dishwasher under normal laundering conditions
- Dries quickly when properly hung on DayMark Glove Station
